What is Hook & Loop?

The hook side of Velcro® is a surface made of small hooks that adhere to the smooth side of the product.

The smooth side is called loop because of the small loops on which the hooks attach.

Hook and loop products come in different grades – light duty, regular duty, heavy duty, marine, and industrial strength.

If you have a special need, let me know and I can recommend the proper strength and type for your need. I can get sticky back and sew-on hook and loop also.
